

Abstract of the Disclosure

An oboe comprising an elongate body in two parts which can fit inside each other, wherein one first part (10) is provided with a place (11) for putting the reed at one end thereof (10a) which is adapted in order to receive said reed and a second part (20) which is adapted in order to be fitted to a bell (30). The transversal plane of fitment of said two parts (10, 20) of the body is located between the octave holes (13) and the note holes, wherein the note holes are positioned exclusively in the second part (20) and the bell (30).
